

**ABSTRACT OF THE DISCLOSURE:**

Discrete animal attractant bubbles are formed  
utilizing a bubble forming solution which includes a  
sufficient amount of a surface active agent to form the  
5 bubbles and a sufficient amount of a animal attractant  
agent, such as natural or artificial female animal estrous,  
to provide the attractant characteristic of the bubbles.  
The animal attractant agent may be natural or synthetic  
extracts, oils, olfactory agents, perfumes, and fragrances  
10 of plants.
